Single iteration

promises ticks timers I/O callback poll check close

A diagram with seven terms at the top: 'promises', 'ticks', 'timers', 'I/O callback', 'poll', 'check', and 'close'. Each term has a curved arrow pointing downwards towards the text 'process.nextTick' located below them.

process.nextTick → this funcⁿ takes a callback.

By calling process.nextTick we instruct node to invoke this
cb funcⁿ at the end of current operation before the
next tick starts.

→ 1) → execution of next tick callback.

↳ all of the cb are added one by one in the next tick queue.

↳ whatever cb are there in the next tick queue are one by one executed.

Priority next tick queue > Priority microtask queue.

a=10

Promise.resolve().then(^{cb}());

→ process.nextTick(^{cb1}());

console.log(a)

cb1 cb2 cb3

10

↳ next tick Queue

→ The first iteration of event loop starts when your current set of instructions are done (main thread is done), and next tick queue is empty, then the iteration of event loop start.

- ① next tick queue will be resolved
- ② Event loop tick (iteration starts)
- ③ Microtask queue / Promise queue (the queue where promise cb are present) starts exec.
- ④ Timers queue (contains all the callbacks of timers)
Starts exec
Start
Next tick 1
promise 1

```

1 console.log("Start");
2
3 setTimeout(() => {
4   process.nextTick(() => console.log("Next Tick 2")); // cb will be waiting in nextTick queue
5 }, 0); // cb will be waiting in timer queue
6
7 Promise.resolve().then(() => console.log("Promise 1")); // cb will be waiting in promise queue
8
9 process.nextTick(() => console.log("Next Tick 1")); // cb will be waiting in nextTick queue
10
11 setTimeout(() => console.log("Timer 2"), 0); // cb will be waiting in timer queue
12

```

NextTick Queue

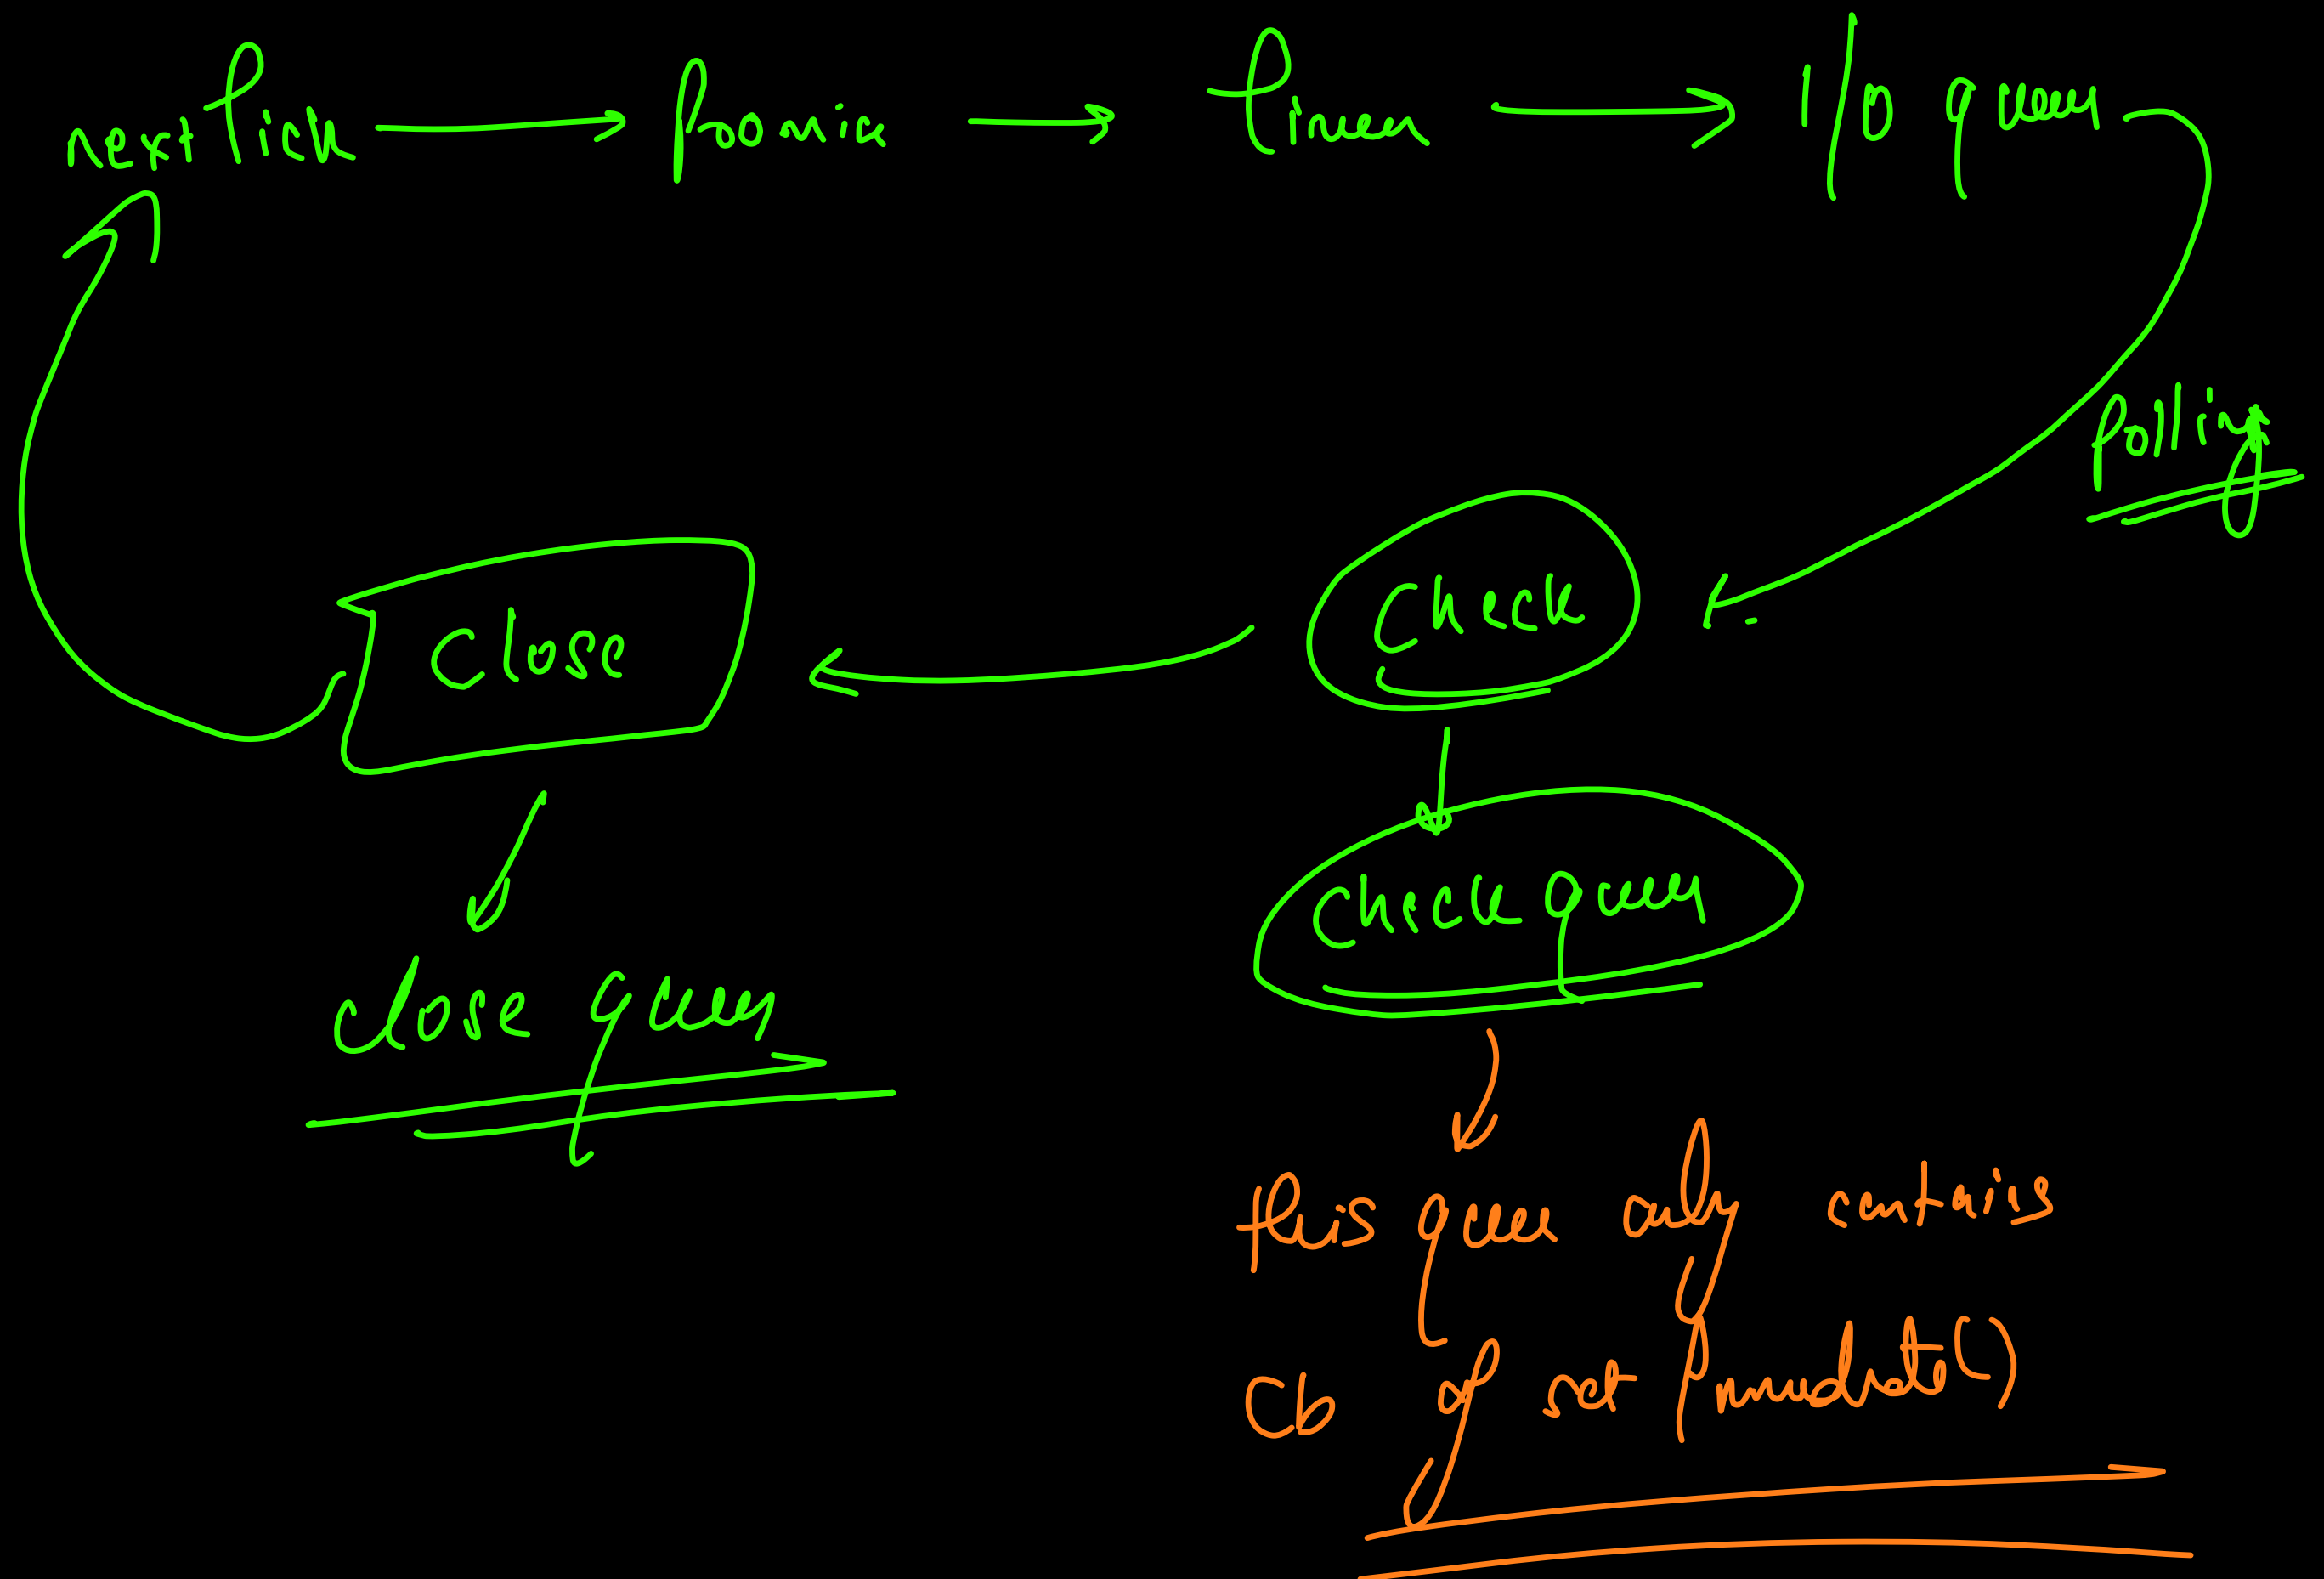

Promise queue

timer queue

- ① Any cb in next tick queue
- ② Any cb in promise queue
- ③ We one by one execute cb in timer queue. But after every cb exec, we check step 1 and 2.
- ④ → Pending call back → I/O queue or callback queue

```

1  const fs = require('fs');
2
3  → fs.readFile('./readme.md', 'utf8', (err, data) ⇒ { // I/O queue - Callback queue
4      if (err) {
5          console.error(err);
6          return;
7      }
8      console.log(data);
9  });
10
11 → process.nextTick(() ⇒ console.log("Next tick"));
12 → Promise.resolve(() ⇒ console.log("Promise 1"));
13 → setTimeout(() ⇒ console.log("Timer 1"), 0);
14 → setImmediate(() ⇒ console.log("Immediate callback"));
15
16 for(let i = 0 ; i < 10000000000; i++ ) {} // > 5s

```
